

SUPPLEMENTAL FIGURE 1

Supplemental Figure 1. Embryonic lethality in lines with N-terminal or C-terminal GFP fusion to SEP-1^{PD}. Both WH520 (C-terminal GFP fusion to SEP-1^{PD}) and WH524 (N-terminal GFP fusion to SEP-1^{PD}) could be maintained on *gfp* RNAi (not shown). The graph shows embryonic lethality for WH520 and WH524 following removal from *gfp* RNAi at 20°C for the indicated number of generations. Each data point with error bars represents the average of a group of 10 singled worms +/- SEM examined in an individual experiment.
